

Engineering Design Firm  
9201 University City Blvd  
Charlotte, NC 28223

**TO:** 1201 Students  
**FROM:** XLIX Management Team  
**DATE:** September 5, 2008  
**SUBJECT:** New Student Engineer/Technologist Perceptions Feedback

As you start your career as a student engineer/technologist, you are beginning to understand the amount of time you will have to spend to stay on top of your assignments and have developed an initial understanding of some whole life concepts. There are a variety of teaching and learning models used in this 1201 course to provide you with an overview of the models you will face in the future.

For this feedback memo, please briefly address the following:

- Are there things about the way you study, the amount of time you study, or your time management skills concerning your studies that you are concerned about and are working to change?
- Compared to individual study, how effective is it for you to learn within a study group or team and what can you do to work better within a team?
- How has your understanding of the amount of writing an engineer does changed (if it has changed) from when you started this course to now?

Your response is required as a one page (maximum) memo to your manager and supervisor by 5:00 pm on Friday, September 12, 2008 by submittal to the proper assignment folder and section via WebHW. Please remember to add the “academic integrity pledge” to the bottom of the memo.
